# DSPXmini encore | AM, & FM AUDIO PROCESSOR

| DSPXmini Encore | DSPXtra Encore |

Jump start your station's audio with the most flexible broadcast processor on the planet.

With it's flexible hardware and firmware, you can select between optimised processing for FM and AM radio.

The multi-band AGC corrects and equalises a wide range of input audio levels, while the peak limiters ensure your broadcast has tightly controlled peak levels. A stereo encoder, and RDS encoder, with sophisticated actions and triggers monitoring system complete the package.

Why you'll never regret choosing the DSPXmini encore.

A Dual-mode broadcast processor for FM and AM radio. Maximum flexability and at a great price.

Dozens of expertly created factory presets enable radio stations to sound great – right out of the box. Experts can tweak hundreds of parameters as much as they desire.

Wide ranging RMS levelling pulls up low level and tames hot signals effortlessly, ensuring a consistent sonic signature, no matter what audio you feed it.

Stereo (MPX) generation & peak limiting offer low distortion audio and compliant bandwidth through advanced anti-aliased protection technology

RDS encoder (UECP compliant) broadcasts your station ID, song and title and much more. Built in as standard!

Silence Detection and Source Switching automatically reverts to auxiliary audio sources, keeping your broadcast on air.

HTML5, FTP, Telnet, SNMP & RS232 Remote Control allows you to monitor and control your processor from anywhere in the world.
